GitHub: <https://github.com/AlaaFarouk37>

Address: 1st settlement, New Cairo, Egypt.

Summary

Ranked 1st over faculty. An Enthusiastic, dedicated & hardworking Information systems student with curiosity towards the tech industry. Passionate about leveraging theoretical knowledge in practical environments to contribute effectively while gaining firsthand experience in all stages of the Software Development Life Cycle.

Education

Future University in Egypt, 5th settlement, New Cairo.

(2022-2026)

GPA: 3.98

Relevant courses: Web Applications, Data structures, Object Oriented Programming, Database systems.

Projects

EmpowerHR – AI-Powered HR Management System (In Progress)

Technologies & Tools: Django REST Framework, JWT Authentication, PostgreSQL, React, PowerBI

Designing and developing a backend-centric HR platform for Egyptian SMEs, implementing core modules such as recruitment, continuous Feedback and Employee Attrition Prediction Pipeline. With Attendance Tracking, payroll, and Task and Leave management In progress. Built scalable backend services using Django and REST APIs, with secure authentication and authorization via JWT. Designing and managing relational databases PostgreSQL, handling business logic, and exposing robust API endpoints for frontend integration. Incorporating data analytics and reporting with Power BI, alongside AI-driven features such as employee attrition prediction. Focused on scalable architecture, modular design, and localization for Egyptian labor regulations.

Wikipedia Search Application

Technologies: Python, APIs, Tkinter UI Library, NLP, Data Structures.

Developed a phrase search engine in Python that leverages the Wikipedia API to fetch live article content based on user input. Implemented natural language preprocessing (tokenization, stop word removal, custom stemming), built a positional inverted index, and enabled efficient phrase matching using positional intersections across documents.

Employee Attrition Prediction using XG Boost Notebook

Technologies: Machine Learning, Pandas, NumPy, Scikit-learn, GridSearchCV.

Applied a structured trial-and-error approach to compare Logistic Regression, Random Forest, and XGBoost. Performed data cleaning, feature engineering, and tailored encoding techniques for different column types, with model evaluation focused on F1-score to balance precision and recall, aligning with the goal of accurately identifying employee leavers. Improved performance through hyperparameter tuning via GridSearchCV and decision threshold optimization, ultimately selecting XGBoost as the best model.

Experience

Cloud Computing Intern

Jeilecom – Cairo

July 2025 – August 2025

- Deployed and configured Microsoft Azure services, including Virtual Machines, Azure App Service, and Load Balancers.
- Hosted a functional web application using two cloud-based approaches: first approach is configuring IIS on Azure Virtual Machines to operate as a web server. Second approach is deploying the application through Azure App Service for platform-managed hosting.
- Implemented Azure Load Balancer to distribute traffic and simulate real-world web hosting architecture.
- Configured shared file storage accessible across the virtual network.
- Extended Virtual Machine storage by provisioning and integrating an additional disk within Azure infrastructure.

Extra-curricular Activities

- **Head of HR committee, GDSC**

Led HR operations, organized university events, assigned tasks, interviewed students and coordinated with other committees, enhancing leadership and communication skills

- **ECPC Training Program**

Engaged in structured training, sharpening critical thinking and problem solving through algorithmic challenges.

- **ECPC Qualification Competition**

Competed in contest, gaining competitive programming skills and teamwork flexibility.

Key Skills

➤ **Soft skills:**

- Attention to detail and problem solving
- Teamwork and adaptability
- Self-study and Quick Learner

➤ **Technical skills**

- Programming languages: Java, C++, C#, SQL, Python, R, JavaScript, HTML, CSS
- Microsoft office: Excel functions, Word, PowerPoint, Access

Certificates

- Odoo Student Diploma (In Progress)
- [Google Data Analytics Professional certificate](#)
- [AI and Machine Learning – Sprints x Microsoft Summer Camp](#)
- [HCIA — Huawei Certified ICT Associate Course Completion](#)
- [Jelecom Cloud Computing Fundamentals Certificate](#)
- [ECPC Qualifications](#)

Languages

- English: Proficient
- Arabic: Native
